Students and instructors using Google Chrome 43 or higher may notice this security warning in their browser’s address bar when accessing Blackboard:

MATC’s IT department has identified this as a browser-based security warning relating to new versions of Google Chrome changing support for 128 bit SSL security certificates in favor of 256 bit SSL certificates. The IT department will be updating MATC’s SSL certificate to accommodate this change in Google Chrome’s SSL support this summer.

Please note that this security prompt only appears in Google Chrome 43 or higher and has no negative impact on Blackboard’s functions or safety. It is simply a warning that Google is changing its SSL support.

**WORKAROUND INSTRUCTIONS**

You may continue to use Blackboard with Google Chrome or alternative web browsers, such as Firefox, Safari, or Internet Explorer.
